当
$$m \mid K \mapsto$$
, $\pm \dot{x} = M \times \left(\frac{K}{m}\right)$;
当 $m \mid K \mapsto$, $\pm \dot{x} = \sum_{n=0}^{k-1} \times (n) W_{N}^{m} \cdot \frac{1 - W_{M}^{m}}{1 - W_{M}^{m}} = 0$.
 $h \mid K \mapsto$ $h \mid \dot{x} \mid D \in T \rightarrow$ $\int 0$, $M \mid K \mid M \mid K$.

b): DFT为
$$\sum_{n=0}^{MN-1} W_{MN}^{kn} \cdot \chi'(n) = \sum_{n=0}^{N-1} W_{MN}^{kmn} \chi'(n) M = \sum_{n=0}^{N-1} W_{N}^{kn} \chi(n)$$
 的 $\sum_{n=0}^{N-1} W_{N}^{kn} \chi(n)$

当箭+2,所求OFT为 X (荒). 否则无意义
